FeatBench

Input: Feature implementation based on abstract natural language: ① ② ③

Output: The standard Git patch files (evaluated by: ④)

① Requirements

I want to be able to access and modify certain Meson build configuration attributes directly in my Conan recipes without needing to work around private variable restrictions. Currently, when using the MesonToolchain, I need to access important build settings like debug flag handling, static library position independence, and compiler standards through indirect methods, which makes my build scripts more complex and less intuitive…

② Repository

- .github/
- test/
- README.md
- conans/
- pyproject.toml
- setup.py

③ Running Environment

- Essential Tools
- Dependencies

④ Evaluate Tests

Pass-to-Pass Tests

```
def test_already_pyc_in_manifest():…
def test_package_reference():…
```

Fail-to-Pass Tests

```
def test_new_public_attributes():…
def test_thread_flags(threads, flags):…
```
